

Keep Crypto Mining Infrastructures Cool and Business Costs Down –

PreVent® System Air Intake Filters

Mining equipment running 24/7 takes a lot of power, requiring a considerable investment to set up a cool, well ventilated and remote space to install your mining farm. While you can choose a location based on inexpensive power and maintain interior temperatures with direct fresh air and high-velocity fans to keep sensitive computer equipment from overheating, you can't control its outdoor environment which often includes high winds stirring up airborne dust and debris that blocks air flow and harms your costly equipment.

PreVent prefilters install on the outside of your air inlet louvers to keep airborne dust away from equipment racks and allow interior high efficiency air filters to last longer. Constructed of UV-protected electrostatic polypropylene media, PreVent filters capture and hold environmental dust until the filter is rinsed or brushed clean.

- Low Resistance to Air Flow
- Reduce Maintenance Costs
- Lower Energy Costs
- 5-Year Warranty
- Made In USA

Need to provide the most cooling with the least possible cost? Contact one of our air filtration specialists today!

CUSTOM FIT - A VARIETY OF FRAME & MOUNT OPTIONS

PreVent Model R:

1/4" steel frame with magnetic stripping mounts to the front inlet opening

PreVent Model U:

Sewn vinyl frame & grommets mounts to the front inlet opening with MagnaMount® or screw-in plastic fasteners

PreVent Model PF:

1" or 2" steel frame slides easily into existing filter rack

Bitcoin, Cryptocurrency, and Blockchain Mining

Cryptocurrency mining requires massive amounts of airflow to keep servers and other required infrastructure at optimal temperatures. Because mining equipment runs 24/7, it generates a tremendous amount of internal heat.

Without the proper air filtration system and air filters to keep devices dust-free and at the proper temperature, mining operations can go down and critical components can be damaged beyond repair.

Air Filters Incorporated offers a line of air filtration products designed to meet the demanding environment of bitcoin, cryptocurrency, and blockchain mining.

CUSTOM FIT - A VARIETY OF FRAME & MOUNT OPTIONS

AIR FILTER HOUSINGS:

- Aire-Loc: Side-Access Filter Housing
- Aire-Loc: Flat Bank Filter Housing
- Aire-Loc: V-Bank Filter Housing

AIR FILTERS:

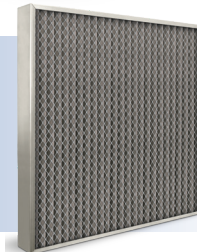

MERV 8-13 Pleated High Velocity Air Filters

- Superior Airflow
- Less Restrictive

Impact Element: Reusable/Washable Filter

- Low Resistance
- High Dust Holding Capacity
