MODEL #DIFFUSER

FEATURES

Ceiling tiles with air vents or diffusers commonly used inside office buildings are held in place with a metal grid system. This filter is designed to magnetically attach to the ceiling grid system and catch ventilation dust before it can be blown down into an office environment. The PreVent ceiling vent or diffuser filter is available for both flush face or drop face styles.

Washable electrostatic filter media is available in white or black honeycomb woven polypropylene. Filter is finished with a lightweight, flexible vinyl edge that contains magnetic stripping.

The center of the filter can be extended down a couple of inches to accommodate the depth of drop face style diffusers designed with multi-tiered air deflectors.

PRODUCT DETAILS

- Average Arrestance Efficiency: 44.5%
- Initial Air Flow Resistance: 0.04" w.g.
- Dust Holding Capacity: 53 grams
- U/L Classified As to Flammability Only
- Clean as needed, rinse with water, brush off or vacuum
- 5 Year Warranty
